GRO

Digital **SPARE PARTS CATALOGUE**

and plant documentation

YOUR ADVANTAGES

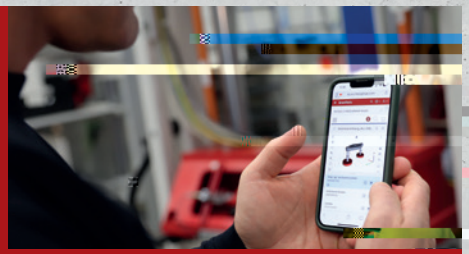

- **Smart** *i* offers 3D models of the HESS system that can be virtually rotated, faded in and out and displayed semi-transparently. This helps to identify spare parts precisely and increases understanding of the machine
- Efficient search functions in the parts catalogue, documentation and wiring diagrams by component name, part number or equipment ID as well as filtering by maintenance-, wear- or critical parts
- Complete overview of documentation of the plant, including HESS and supplier documents
- Support for Spare Parts Identification: The **Smart** *i* add-on **Parts** uses a QR code reader to quickly and easily identify spare parts. This allows parts to be accessed directly in **Smart-***i* and requested efficiently
- Individual, Customer-Specific Consulting: As part of the consulting service, relevant spare and wear parts are compiled according to the customer's specific requirements and documented in a clear and structured manner. This includes creating a favourites list in **Smart** *i* . In addition, QR code stickers are provided to clearly identify the corresponding parts on site and enable quick reordering when required.

SCOPE OF SERVICE

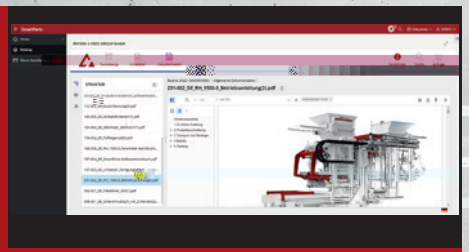

- Customer-specific spare parts catalogue with 3D models
- Documentation incl. operating instructions and manuals in PDF format
- Optional add-on: **Parts**
- Optional support for spare parts management
